IPTV SaaS Version 1.0 — Detailed MVP Specification

Primary Goals

- Launch within 90–120 days
- Acquire first 3–5 tenants
- Validate pricing
- Collect real-world feedback
- Establish technical foundation

Target Audience

- Small IPTV resellers
- Local cable operators
- Regional broadcasters
- Hospitality providers
- Religious streaming networks

Core Modules

- Authentication & Authorization with JWT, refresh tokens, RBAC, password reset, and email verification.
- Multi-Tenant Management with strict tenant isolation and tenant-scoped data.
- White-Label Branding including logo, colors, favicon, and custom domains.
- Channel Management supporting M3U playlists and HLS stream URLs.
- Playlist Import for automatic channel and category creation.
- Subscriber Management with account suspension, password reset, and subscription assignment.
- Subscription Plans (monthly, quarterly, yearly).
- Stripe Billing integration with subscriptions and webhook handling.
- Live TV Player using HLS with auto-reconnect and channel switching.

- End-User Portal for watching channels and managing subscriptions.
- Tenant Admin Dashboard with business metrics.
- Super Admin Dashboard with platform-wide metrics.

Recommended Technology Stack

- Backend: Spring Boot, Spring Security, PostgreSQL, Redis
- Frontend: React, Tailwind CSS, ShadCN UI
- Infrastructure: Docker, AWS, Cloudflare

Security Requirements

- HTTPS everywhere
- BCrypt password hashing
- Rate limiting
- Tenant isolation
- JWT expiration and refresh rotation
- Audit logging

Version 1 Limitations

- No mobile applications
- No Smart TV applications
- No DRM
- No EPG
- No Video on Demand
- No Catch-up TV
- No reseller hierarchy
- No multiple payment gateways

Success Criteria

- 3 paying tenants onboarded

- 100+ active end users
- Less than 1% stream failure rate
- Positive customer feedback
